

Bracketball:

Let's Explore March Madness with ncaahoopR

Luke Morris

Data Analyst, Cedars-Sinai

I know what you're thinking...

Ugh ... sportsball?!

There's something for everyone here

- A fantastic adaptation of PageRank algorithm
- Smart examples of data visualization
- An R user's journey to finally understand what they're doing

About me

- Kansas born-and-bred Jayhawk and, thus, enormous college basketball nerd
- Former journalist who got hooked on analytics while trying to optimize news content
- Back to school for master's in Business Analytics
- Emergency Department Business Data Analyst for Cedars-Sinai Medical Center

LinkedIn vs. Twitter

About ncaahoopR

- Created by [Luke Benz](#) while a student at Yale
- Serves an often-overlooked set of sports fans with easy-to-use scraping and viz tools
- This package really accelerated my R learning process
 - Found a package tied to my passion
 - Had to learn to read documentation to use tools
 - So engaging I was driven to contribute to package

What can you do with ncaahoopR?

- Scrape NCAA basketball data from ESPN
 - While NBA fans have a wealth of data to play with thanks to the league, CBB fans aren't as fortunate
 - Can break down by team, season, individual game, etc.
 - Even if you don't want to use package's other tools, this gets you in a place where you can combine with Tidyverse to start breaking things down.

```
> library(ncaahoopR)
> get_pbp(team = "UCLA", season = "2018-19")
Getting Game IDs: UCLA
```

```
get_pbp(team = "USC", season = c(401170698, 401170694, 401170690, 401170682))|
```

What can you do with ncaahoopR?

Built-in plotting

Win Probability

```
> gg_wp_chart(game_id = 401170661, home_col = "#2D68C4", away_col = "#990000")
```

Luke Benz (@reospec730) Data Accessed via ncaahoopR

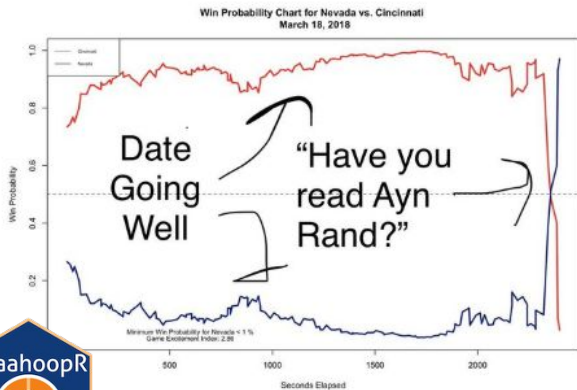

Nevada-Cincinnati's win probability chart was so bonkers it became a meme

... and it's the best meme of the tournament so far.

Assist Networks

```
> assist_net(team = "UC Irvine", season = 401171666, node_col = "#FFC72C", three_weights = TRUE, threshold = 0.05)
```

Weighted Assist Network: Assisted 2 point shots are given weight 1, Assisted 3 point shots are given weight 1.5

- Visualizes team's offensive connections on assisted baskets
- Model adapted from PageRank to determine network's makeup
- Can be used for single games, a series of games, or a whole season
- Full results printed to console

Use Cases

Luke Benz's senior thesis:

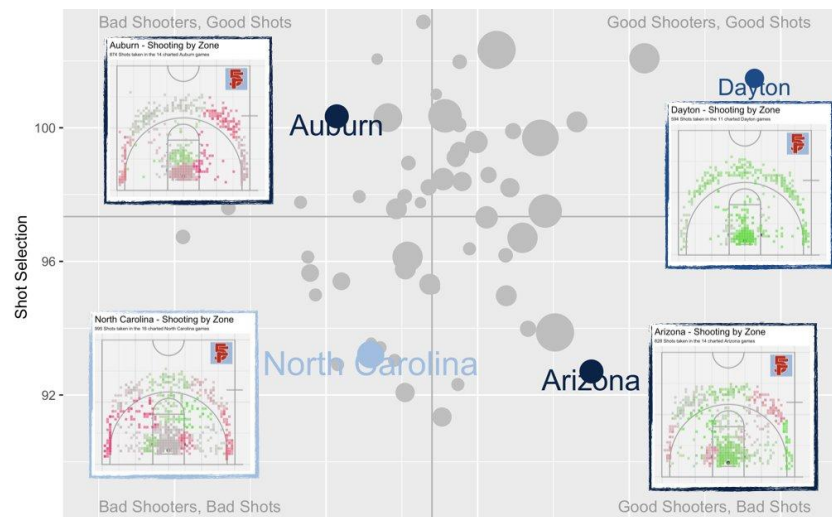

“If asked to report a single figure for the value of a timeout, this paper would conclude that timeouts are worth between 1.5-2.2 points over a five minute interval following the timeout.”

Use Cases

Smart breakdowns from a national context by [Fifth Factor Plots](#)

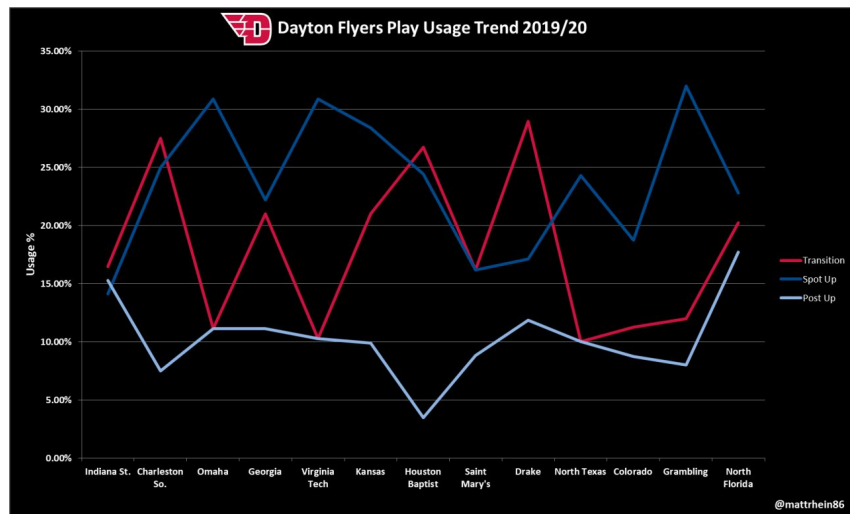

Great analysis of shot selection and shot quality

Use Cases

Matt Rhein's [breakdown of Dayton and Atlantic 10 basketball](#)

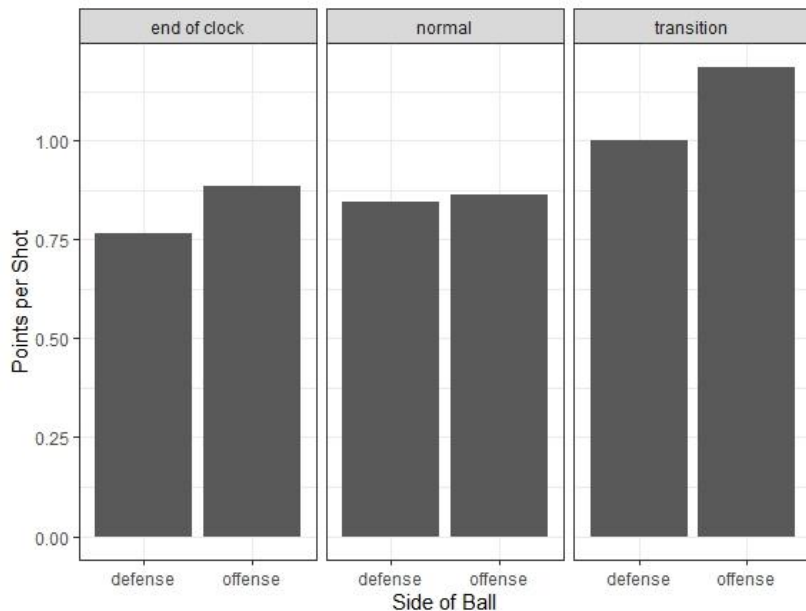

ncaahoopR + Tidyverse + Tableau (or ggplot) = 🤖

Use Cases

- Tristan Enaruna
- Udoka Azubuike

ncaahoopR just keeps growing...

Recent community additions:

- [Season-so-far repos](#) to cut out scrape time
- [Meyappan Subbaiah](#) and [C. Ryan Campbell](#) aided with gathering and mapping shot data
- [Jared Andrews](#) helped with box score info
- I've even contributed team logos and colors
- Jake Flancer's [bigballR](#) is also a great package for analyzing team lineups
- [Scott Nestler](#) created [wncaahoopR](#) for women's basketball
